

Job Red Flag Analysis Report

Position: Associate / Software Engineer (Entry Level) — Infosys
AI Red Flag Detector for Job Seekers | Generated June 14, 2026

FINAL VERDICT — APPLY WITH CAUTION

Infosys is a large, financially stable, globally established employer with a structured training program. However, documented industry patterns around fresher onboarding delays, post-training assessment-based exits, and the absence of salary/location details in this posting warrant careful questioning before accepting an offer.

Top Red Flags

Onboarding delays for freshers (8/10)

Reports describe Infosys offer-holders waiting as long as two years to be onboarded, with repeated unpaid training required to remain eligible.

Post-training termination risk (8/10)

In early 2025, over 300 freshers who completed foundational training at Mysuru were let go after failing internal assessments within three attempts; the employee union claimed the real number was higher and that many had already waited ~2 years after their offer letter.

No salary / compensation info (7/10)

Common in Indian IT postings, but a major information gap for entry-level candidates planning their finances, especially given onboarding-delay risk.

Vague, generic responsibilities (5/10)

"Participate in software development projects" and "contribute to client-facing digital solutions" give no indication of tech stack, project domain, team size, or daily work.

Work location & remote status undisclosed (5/10)

Infosys runs a hybrid model depending on project requirements. Expect mandatory residential training (Mysuru campus) and possible relocation to a client/delivery location — neither is stated in the JD.

Broad SDLC ownership for entry-level (4/10)

"Analyze, design, develop, test, and support" spans the full lifecycle — a classic 'wear many hats' signal for a fresher role, despite the mentorship promise.

Immediate client-facing exposure (3/10)

Direct client exposure with minimal experience can mean high-pressure delivery with little buffer for mistakes.

Positive Signals

- Large, financially stable company — 40+ years old, ~328,000 employees across 59 countries; low risk of the role disappearing for business-failure reasons.
- Recognized as one of the World's Most Ethical Companies (2024 & 2025) by the Ethisphere Institute, and named a Top Employer 2026 across Europe, the Middle East, and Asia-Pacific.
- Requirements are appropriately scoped for entry level — no contradictory “5 years experience for a junior role” type asks.
- Structured, large-scale training infrastructure exists, so the “learning opportunities” claim is operationally credible, not just marketing language.
- No overt ‘hustle culture’ or ‘rockstar’ language in the job description itself.

Risk Breakdown by Category

Category	Risk Level
Requirements	Low
Culture	Medium-High
Remote	Medium
Hiring	High
Company	Medium

5 Smart Interview Questions

Use these to validate (or dispel) the risks identified above before accepting an offer.

- **Q1.** Could you walk me through the expected timeline from offer letter to actual project onboarding — historically, has there been a gap, and if so, how long, and is any stipend paid during that period?
- **Q2.** What does the compensation structure look like — base salary, any training-period pay differences, and the typical timeline to a full project assignment and CTC review?
- **Q3.** After the foundational training program, is there an internal assessment that determines continued employment? If so, how many attempts are given, is the training period paid, and what support is available if someone doesn't clear it on the first try?
- **Q4.** What is the actual work arrangement for this role — fully on-site, hybrid, or remote — and is relocation required for training or for client project placement after training?
- **Q5.** For someone in this entry-level role, how are the 'analyze, design, develop, test, and support' responsibilities actually divided day-to-day, and what does mentorship/support from senior engineers look like in practice on a typical project?
